#### **GENERAL DESCRIPTION**

Global LCD Panel Exchange Center

#### **DESCRIPTION**

LTN154AT07-B01 is a color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) that uses amorphous silicon TFT as switching devices. This model is composed of a TFT LCD panel, a driver circuit and a backlight system. The resolution of a 15.4" contains 1280 x 800 pixels and can display up to 262,144 colors. 6 O'clock direction is the Optimum viewing angle.

#### **FEATURES**

- Thin and light weight
- High contrast ratio, high aperture structure
- Wide XGA (1280x800 pixels) resolution
- Fast Response Time
- Low power consumption
- Single CCFL
- DE (Data enable) only mode.
- 3.3V LVDS Interface
- On board EDID chip
- RoHS Compliance Product

#### **APPLICATIONS**

- Notebook PC
- If the usage of this product is not for PC application, but for others, please contact SEC

#### **GENERAL INFORMATION**

Item	Specification	Unit	Note
Display area	331.2(H) X 207.0(V) (15.4"diagonal)	mm	
Driver element	a-si TFT active matrix		
Display colors	262,144		
Number of pixel	1280 x 800 ( 16 : 10, Wide XGA )	pixel	
Pixel arrangement	RGB vertical stripe		
Pixel pitch	0.25875(H) x 0.25875(V)	mm	
Display Mode	Normally white		
Surface treatment	Haze 0, Hard-Coating 3H

### 1.2 ELECTRICAL ABSOLUTE RATINGS

## (1) TFT LCD MODULE

 $V_{DD} = 3.3V$ ,  $V_{SS} = GND = 0V$ 

Item	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage	V <sub>DD</sub>	V <sub>DD</sub> - 0.3	V <sub>DD</sub> + 0.3	V	(1)
Logic Input Voltage	V <sub>DD</sub>	V <sub>DD</sub> - 0.3	V <sub>DD</sub> + 0.3	V	(1)

Note (1) Within Ta (25  $\pm$  2  $^{\circ}C$  )

## (2) BACK-LIGHT UNIT

Ta =  $25 \pm 2$  °C

Item	Symbol	Min.	Max.	Unit	Note
Lamp Current	IL	3.0	7.0	mArms	(1)
Lamp frequency	F <sub>L</sub>	50	80	kHz	(1)

Note 1) Permanent damage to the device may occur if maximum values are exceeded Functional operation should be restricted to the conditions described under normal operating conditions.

#### Approval 3.2 BACK-LIGHT UNIT

The backlight system is an edge-lighting type with a single CCFT (Cold Cathode Fluorescent Tube). The characteristics of a single lamp are shown in the following table.

- INVERTER: SEM SIC 130T

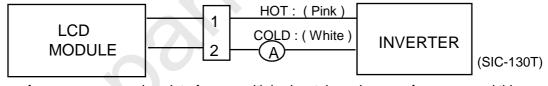

Ta=  $25 \pm 2$  °C

Item	Symbol	Min.	Тур.	Max.	Unit	Note
Lamp Current	lι	3.0	6.0	6.5	mArms	(1)
Lamp Voltage	VL	-	705	-	Vrms	I∟=6.0mA
Frequency	f∟	50	60	65	KHz	(2)
Power Consumption	P∟		4.2		W	(3) I <sub>L</sub> =6.0mA
Operating Life Time	Hr	10,000			Hour	(4)
Startup Valtage	,,			1,180	Vrms	25°C, (5)
Startup Voltage	Vs		-	1,415	Vrms	0°C, (5)
Lamp startup time		-	-	1.0	sec	(5)

Note) The waveform of the inverter output voltage must be area symmetric and the design of the inverter must have specifications for the modularized lamp.

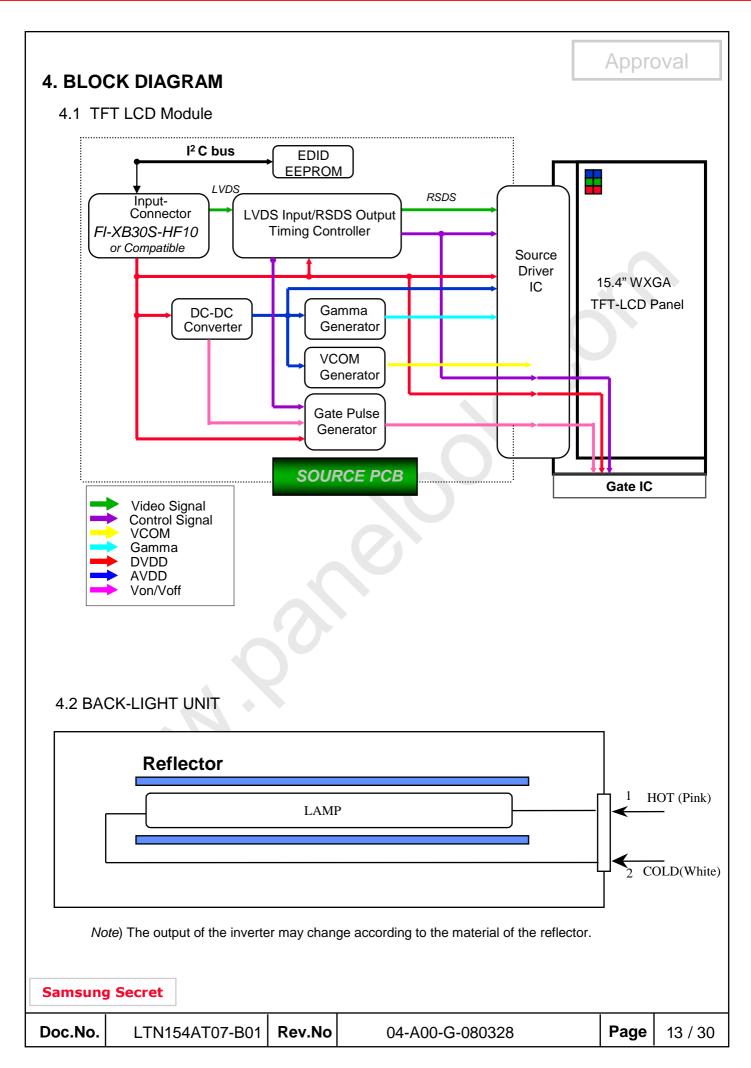

The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter(miss lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Note (1) Lamp current is measured with a high frequency current meter as shown below.

- (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency should be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- (3) Refer to IL×VL to calculate.
- (4) Life time (Hr) of a lamp can be defined as the time in which it continues to operate under the condition Ta= 25 ± 2 °C and IL = 6.0 mArms until one of the following event occurs.
  - 1. When the brightness becomes 50% or lower than the original.
  - 2. When the Effective ignition length becomes 80% or lower than the original value. (Effective ignition length is defined as an area that has less than 70% brightness compared to the brightness in the center point.)
- (5) The inverter open voltage this voltage should be measured after ballast capacitor- have to be larger than the lamp startup voltage, otherwise backlight may has blinking for a moment after turns on or not be turned on.
  - If an inverter has shutdown function it should keep its open voltage for longer than 1 second even if lamp connector open.

## 6.3 Power ON/OFF Sequence

Approval

: To prevent a latch-up or DC operation of the LCD module, the power on/off sequence should be as the diagram below.

## Power ON/OFF Sequence

T1: Vdd rising time from 10% to 90%

T2: The time from Vdd to valid data at power ON.

T3: The time from valid data off to Vdd off at power Off.

T4: Vdd off time for Windows restart

T5: The time from valid data to B/L enable at power ON.

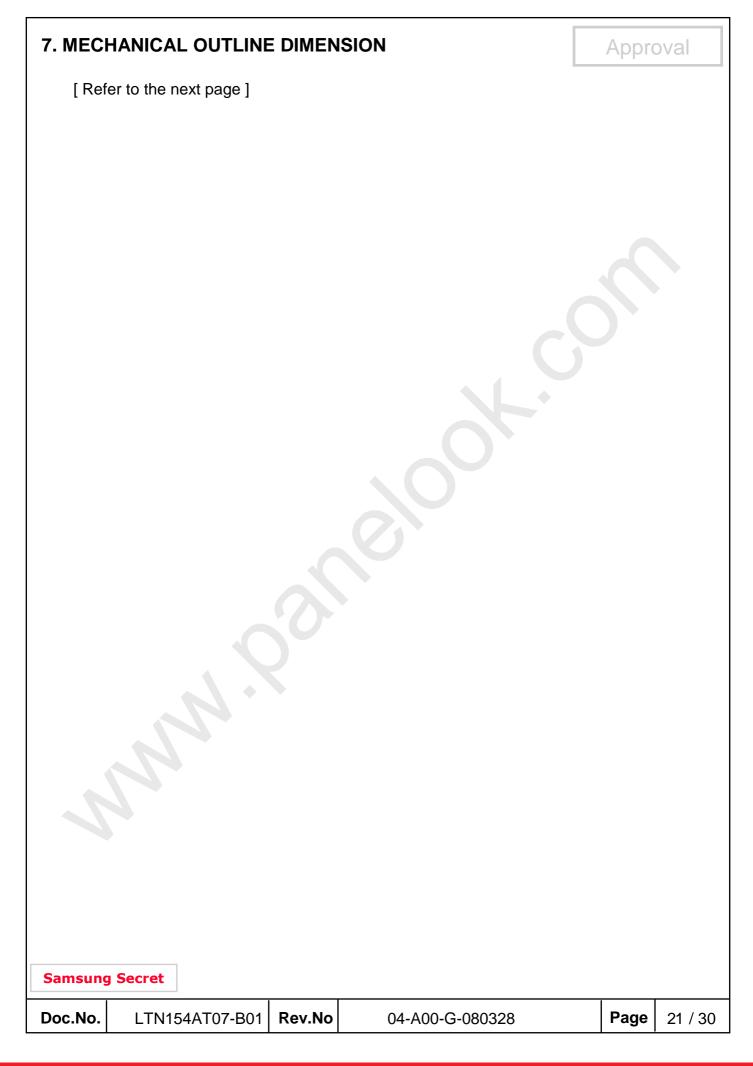

T6: The time from valid data off to B/L disable at power Off.

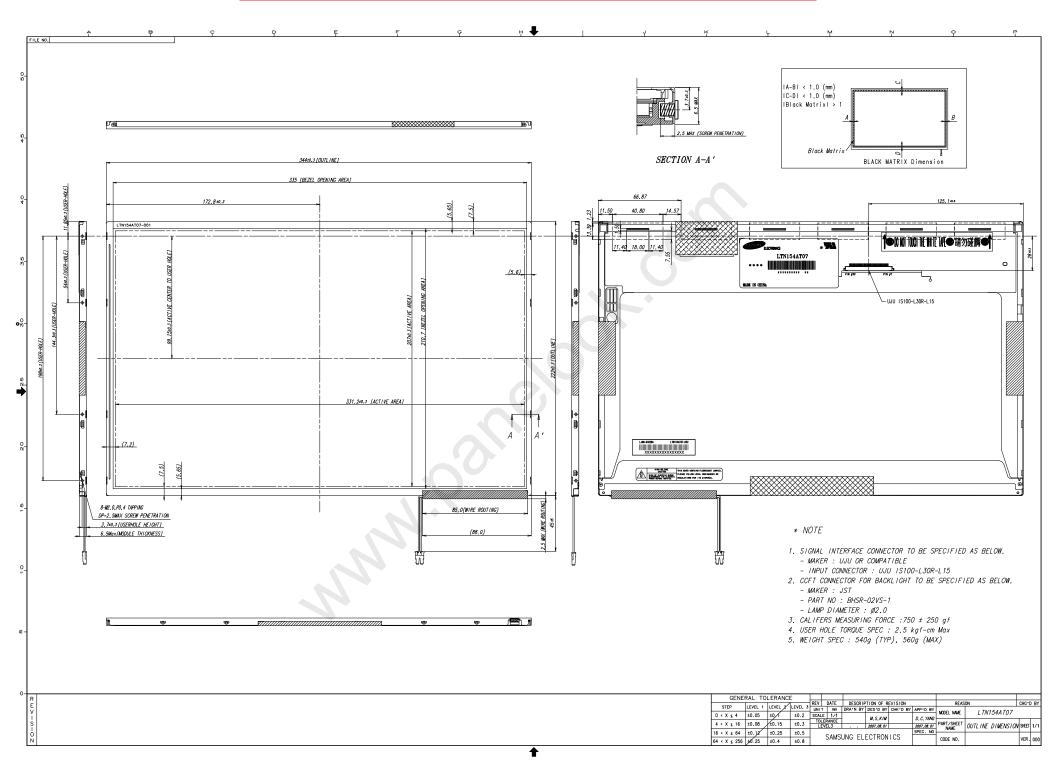

#### NOTE.

- (1) The supply voltage of the external system for the module input should be the same as the definition of VDD.
- (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.
- (3) In case of VDD = off level, please keep the level of input signals on the low or keep a high impedance.
- (4) T4 should be measured after the module has been fully discharged between power off and on period.
- (5) Interface signal shall not be kept at high impedance when the power is on.

## (3)Packing Material

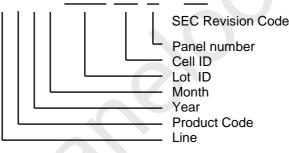

No	Part name	Quantity
1	Static electric protective sack	10
2	Packing case (Inner box) included shock absorber	1 set
3	Pictorial marking	2 pcs
4	Carton	1 set

## 9. MARKINGS & OTHERS

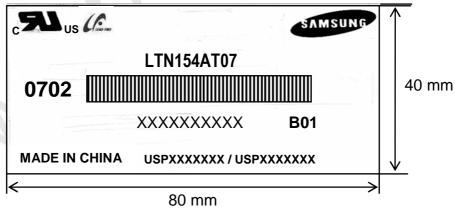

A nameplate bearing followed by is affixed to a shipped product at the specified location on each product.

(1)Parts number: LTN154AT07-B01

(2)Revision code: 3 letters

### (5) Nameplate Indication

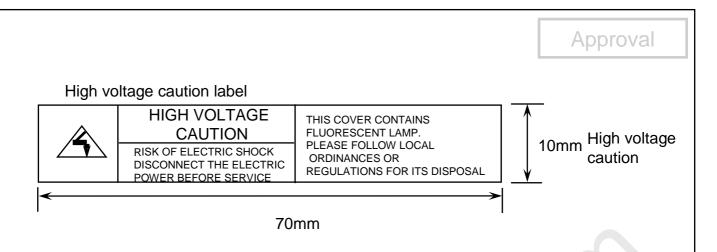

Parts name : LTN154AT07 Lot number : XXXXXXXXX

Inspected work week : 0702(2007 year 2nd week)

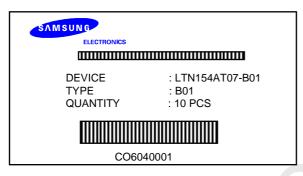

Product Revision Code: B01

Doc.No.	LTN154AT07-B01	Rev.No	04-A00-G-080328	Page	24 / 30	

(6) Packing small box attach

(7) Packing box Marking: Samsung TFT-LCD Brand Name

_			_		
62	ms	HIP	50	Cr	Δt

#### 10. GENERAL PRECAUTIONS

Approval

#### 1. Handling

- (a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.
- (b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- (c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- (d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (f) The desirable cleaners are water, IPA (Isoprophyl Alcohol) or Hexane.

  Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (h) Protect the module from static, it may cause damage to the C-MOS Gate Array IC.
- (i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (j) Do not disassemble the module.
- (k) Do not pull or fold the lamp wire.
- (I) Do not adjust the variable resistor which is located on the back side.
- (m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (n) Pins of I/F connector shall not be touched directly with bare hands.

Doc.No.	LTN154AT07-B01	Rev.No	04-A00-G-080328	Page	26 / 30	
---------	----------------	--------	-----------------	------	---------	--

#### 2. STORAGE

Approval

- (a) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35 °C and relative humidity of less than 70%.
- (b) Do not store the TFT-LCD module in direct sunlight.
- (c) The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

#### 3. OPERATION

- (a) Do not connect, disconnect the module in the "Power On" condition.
- (b) Power supply should always be turned on/off by following item 6.3 "Power on/off sequence ".
- (c) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (d) The cable between the back-light connector and its inverter power supply shall be a minimized length and be connected directly. The longer cable between the back-light and the inverter may cause lower luminance of lamp(CCFT) and may require higher startup voltage (Vs).
- (e) The standard limited warranty is only applicable when the module is used for general notebook applications. If used for purposes other than as specified, SEC is not to be held reliable for the defective operations. It is strongly recommended to contact SEC to find out fitness for a particular purpose.

#### 4. OTHERS

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (c) Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, variation in part contents and environmental temperature, so on) Otherwise the module may be damaged.
- (d) If the module displays the same pattern continuously for a long period of time, it can be the situation when the image "sticks" to the screen.
- (e) This module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.
